

Statistics with Spa OWS

Lecture 5

Julia Schroeder

Julia.schroeder@imperial.ac.uk

Outline

- Check-in: 95CI
- T-test
- Conventions: how to report t-test?

What are statistics?

- We want to know if a null hypothesis is rejected
- Most of the time, we want to know if data is distributed according to what we believe it should be distributed, given what we know

What are statistics?

- We want to know if a null hypothesis is rejected
- Most of the time, we want to know if data is distributed according to what we believe it should be distributed, given what we know
- We will test is the mean of the
- 2001 data truthfully represents the
- complete population.

What are statistics?

- We want to know if a null hypothesis is rejected
- Most of the time, we want to know if data is distributed according to what we believe it should be distributed, given what we know
- We will test is the mean of the
- 2001 data truthfully represents the
- complete population.
- We will test if 2001 mean is within
- a certain range of values

Hypothesis testing

- H_0 = true mean is equal to mean of 2001
- H_1 = true mean is not equal to mean of 2001

We accept every mean within 95% of the distribution
That means from 2.5%-97.5% cumulative%

We accept every mean within 95% of the distribution
That means from 2.5%-97.5% cumulative%

This is the 95% interval.

"Bell Curve"
Standard Normal
Distribution

We accept every mean within 95%
of the distribution
That means from
2.5%-97.5% cumulative%

This is the 95% interval.

Or an Error of 5%

How to calculate it?

$$CI_{95\%} = \pm 1.96 \frac{s}{\sqrt{n}}$$

$$CI_{95\%} = \pm 1.96 \frac{s}{\sqrt{n}}$$

It is the mean plus/minus 1.96 times the standard deviation divided by the square root of the sample size

Histogram of znormal

density.default(x = znormal)

Looks familiar?

$$CI_{95\%} = \pm 1.96 \frac{s}{\sqrt{n}}$$

Looks familiar?

$$CI_{95\%} = \pm 1.96 \frac{s}{\sqrt{n}}$$

Rule-of-thumb:
Twice the SE!

$$se = \sqrt{\frac{s^2}{n}}$$
$$se = \frac{s}{\sqrt{n}}$$

Remember:

	Tarsus	Tarsus 2001
Variance	0.74	0.72
Standard deviation	0.86	0.85
N	1685	168
Standard error	0.02	0.07
Mean	18.52	18.19

Remember:

	Tarsus	Tarsus 2001
Variance	0.74	0.72
Standard deviation	0.86	0.85
N	1685	168
Standard error	0.02	0.07
Mean	18.52	18.19

Is the sample from 2001 representative of the whole population?

Does the mean of 2001 fall within all possible means of the true distribution? We allow an error of 5%.

Histogram of znormal

density.default(x = znormal)

- Let's test this!

	Tarsus	Tarsus 2001
N	1685	168
Standard error	0.02	0.07
Mean	18.52	18.19
~95%CI Mean+- (2*SE)		

- Let's test this!

	Tarsus	Tarsus 2001
N	1685	168
Standard error	0.02	0.07
Mean	18.52	18.19
~95%CI Mean+- (2*SE)		18.05 – 18.33

- Let's test this!

	Tarsus	Tarsus 2001
N	1685	168
Standard error		0.07
Mean	18.52	18.19
~95%CI Mean+- (2*SE)	DOES NOT SPAN 18.52	18.05 – 18.33

NO! We reject H_0 !

T-test

- H_0 = true mean is equal to 18.5
- H_1 = true mean is not equal to 18.5

$$t_{\hat{\beta}} = \frac{\hat{\beta} - \beta_0}{\text{s. e.}(\hat{\beta})}$$

- Sample size is 168, thus $df = 167$

T-test

- H0 = true mean is equal to 18.5
- H1 = true mean is not equal to 18.5

$$t_{\hat{\beta}} = \frac{\hat{\beta} - \beta_0}{\text{s. e.}(\hat{\beta})}$$

- Sample size is 168, thus $df = 167$

	Tarsus	Tarsus 2001
N	1685	168
Standard error		0.07
Mean	18.52	18.19
~95%CI Mean+- (2*SE)	DOES NOT SPAN 18.52	18.05 – 18.33

T-test

- H0 = true mean is equal to 18.5
- H1 = true mean is not equal to 18.5

$$t_{\hat{\beta}} = \frac{\hat{\beta} - \beta_0}{\text{s. e.}(\hat{\beta})} \qquad \frac{18.19 - 18.5}{0.07}$$

- Sample size is 168, thus $df = 167$

	Tarsus	Tarsus 2001
N	1685	168
Standard error		0.07
Mean	18.52	18.19
~95%CI Mean+- (2*SE)	DOES NOT SPAN 18.52	18.05 - 18.33

T-test

- H_0 = true mean is equal to 18.5
- H_1 = true mean is not equal to 18.5

$$t_{\hat{\beta}} = \frac{\hat{\beta} - \beta_0}{\text{s.e.}(\hat{\beta})} \quad \frac{18.19 - 18.5}{0.07} \quad t = -4.42$$

- Sample size is 168, thus $df = 167$

T-test

- H_0 = true mean is equal to 18.5
- H_1 = true mean is not equal to 18.5

$$t_{\hat{\beta}} = \frac{\hat{\beta} - \beta_0}{\text{s.e.}(\hat{\beta})} \quad \frac{18.19 - 18.5}{0.07}$$

$$t = -4.42$$

- Sample size is 168, thus $df = 167$

T-test

- H_0 = true mean is equal to 18.5
- H_1 = true mean is not equal to 18.5

$$t_{\hat{\beta}} = \frac{\hat{\beta} - \beta_0}{\text{s.e.}(\hat{\beta})} = \frac{18.19 - 18.5}{0.07} \quad t = -4.42$$

- Sample size is 168, thus $df = 167$

p-value

T-test

- H_0 = true mean is equal to 18.5
- H_1 = true mean is not equal to 18.5

$$t_{\hat{\beta}} = \frac{\hat{\beta} - \beta_0}{\text{s.e.}(\hat{\beta})} = \frac{18.19 - 18.5}{0.07} = -4.42$$

- Sample size is 168, thus $df = 167$

p-value

TABLE of CRITICAL VALUES for STUDENT'S t DISTRIBUTIONS

Column headings denote probabilities (α) **above** tabulated values.

T-test

- H_0 = true mean is equal to 18.5
- H_1 = true mean is not equal to 18.5

$$t_{\hat{\beta}} = \frac{\hat{\beta} - \beta_0}{\text{s. e.}(\hat{\beta})} = \frac{18.19 - 18.5}{0.07} = -4.42$$

- Sample size is 168, thus $df = 167$

p-value

T-test

- P-value: statistical significance
- We accept alternative hypothesis with a probability of $p=0.000003961$ to be wrongly accepted

T-test

- P-value: statistical significance
- We accept alternative hypothesis with a probability of $p=0.000003961$ to be wrongly accepted
- We consider $p<0.05$ (5%) as statistically significant
- That's a convention, there is no real reason for why that's better than $p<0.04$ or 0.06

T-test – hypothesis testing

- H_0 = true mean is equal to 18.5
- H_1 = true mean is not equal to 18.5
- `d1<-subset(d, d$YEAR==2001)`

Mean	18.52	18.19
~95%CI Mean+- (2*SE)	DOES NOT SPAN 18.52	18.05 – 18.33

We can also use t to test for differences in mean:

- H_0 = males and females have equal mean
- H_1 = male and female mean is not equal

We can also use t to test for differences in mean:

- H_0 = males and females have equal mean
- H_1 = male and female mean is not equal
- \Rightarrow testing if the *difference* is
- equal to testing for zero

We can also use t to test for differences in mean:

- H_0 = males and females have equal mean
- H_1 = male and female mean is not equal

```
> t.test(d1$tarsus~d1$Sex, na.rm=TRUE)
```

Welch Two Sample t-test

```
data: d1$tarsus by d1$Sex
```

```
t = 1.2257, df = 139.07, p-value = 0.2224
```

```

We can also use t to test for differences in mean:

- H_0 = males and females have equal mean
- H_1 = male and female mean is not equal
- \Rightarrow testing if the *difference* is
- equal to testing for zero

t-distribution: dependent on degrees of freedom

$$t_{\hat{\beta}} = \frac{\hat{\beta} - \beta_0}{\text{s. e.}(\hat{\beta})}$$

Means that the bigger the sample size,
the more likely we will find statistical differences!

Convention – reality check

- How to report results from a t-test?

```
> t.test(d1$Tarsus~d1$Sex,na.rm=TRUE)
```

Welch Two Sample t-test

data: d1\$Tarsus by d1\$Sex

t = 1.2257, df = 139.07, p-value = 0.2224

```

```
> |
```

DO IT NOW– HO 5

- Test if wing length in 2001 differs from the grand-total mean in wing length
 - Test if male and female wing length differ in 2001
 - Test if male and female wing length differ in the full dataset
 - Report in a table, don't forget the N's!
-
- Report in text

Exercise – discussion

- What did you notice happened when you took smaller samples?
- Why did the precision go down?
- How many sparrows do you have to sample to get the correct answer?
